

Streamlining-Ticket-Assignment-for-Efficient-Support-Operations

📄 Project Overview

This project implements an **automated ticket routing system** within **ServiceNow** for ABC Corporation. The goal is to improve operational efficiency by intelligently assigning support tickets to the appropriate support teams based on the issue type.

🎯 Objective

- Minimize delays in issue resolution.
- Improve customer satisfaction.
- Optimize resource utilization in the support department.
- Automate repetitive routing tasks using **ServiceNow Flows** and **Access Control Rules**.

🛠️ Features

- 🔑 Create users, groups, and roles within ServiceNow.
- 📄 Custom table: `Operations Related` for tracking support issues.
- ✅ Role-based access control using ACLs.
- 🔄 Automated flow-based ticket assignment based on the issue type.
- 📱 Mobile module support.

🌱 Issue Types & Group Assignments

Issue Type	Assigned Group
Regarding certificates	Certificates
Unable to login to platform	Platform
404 error	Platform
Regarding user expired	Platform

🛠️ Setup Instructions (ServiceNow)

👤 Create Users

1. Navigate to: `All > Users (under System Security)`
2. Click **New** and fill user details
3. Submit and repeat for additional users

👥 Create Groups

1. Go to: `All > Groups`
2. Add new groups such as `Platform`, `Certificates`

🔑 Create Roles

1. Navigate to: `All > Roles`

2. Add roles like `Platform\_role`, `Certificate\_role`

🗑️ Create Table

- Label: `Operations Related`
- Enable: `Create module` and `Create mobile module`
- Add issue-related fields

📋 Add Choice Values to Issues

Choices include:

- Unable to login to platform
- 404 error
- Regarding certificates
- Regarding user expired

👤 Assign Users & Roles to Groups

- Add users like `Katherine Pierce` to the `Certificates` group and assign `Certificate\_role`.
- Add users like `Manne Niranjana` to the `Platform` group and assign `Platform\_role`.

🔑 Configure Role Access to Table

- Use **Application Access** section of the `Operations Related` table.
- Require `Platform\_role` and `Certificate\_role` for read/write permissions.

🔒 Create ACL (Access Control)

1. Navigate to: `All > Access Control (ACL)`
2. Add 4 ACLs for table and fields
3. Require `admin` role

🔄 Create Flows (ServiceNow Flow Designer)

Flow: Regarding Certificate

- Trigger: Record created/updated in `Operations Related`
- Condition: `issue == Regarding certificates`
- Action: Update `assigned\_to\_group = Certificates`

Flow: Regarding Platform

- Trigger: Record created/updated in `Operations Related`
- Conditions:
 - `issue == Unable to login to platform`
 - `issue == 404 error`
 - `issue == Regarding user expired`
- Action: Update `assigned\_to\_group = Platform`

✅ Result

The system automatically assigns tickets based on issue type, enhancing service desk efficiency.

📌 Conclusion

This project successfully automates ticket routing in ServiceNow, improving resolution speed and team coordination. It provides a scalable solution that minimizes human error and manual interventions in support operations.

🌐 Technologies Used

- 💻 ****ServiceNow Platform****
- ⚙️ Flow Designer
- 🔒 ACL & Role-Based Access
- 📁 Custom Tables and Forms
