

PROJECT DESIGN:

Date	02-11-2025
Team id	NM2025TMID06533
Project name	Streamlining ticket assignment for efficient support operations

Proposed solution:

Sl.NO	PARAMETER	DISCRIPTION
1	Problem statement (problem to be solved)	Manual ticket assignment is slow and inefficient, causing delays and lower customer satisfaction. We need a faster, automated way to assign tickets to the right support agents based on their skills, workload, and ticket priority.
2	Idea/solution description	Use an automated ticket assignment system that quickly matches incoming tickets to the right support agents based on their skills, availability, and ticket priority. This will speed up response times, balance workloads, and improve customer satisfaction
3	Noveity/uniqueness	The unique aspect of this solution is the smart, automated matching of tickets to agents using real-time data like skills, workload, and ticket priority. Unlike basic assignment methods, it can adapt instantly to changes, ensuring faster, fairer, and more accurate ticket distribution.
4	Social impact/customer satisfaction	helps customers get faster, more accurate support, which increases their satisfaction and trust in the service. It also reduces stress and overload for support agents, creating a better work environment and improving overall team performance.

5	Business model/revenue model)	The solution can be offered as a subscription-based software (SaaS), where businesses pay monthly or yearly fees based on the number of users or tickets handled. Additional revenue can come from premium features like advanced reporting, AI-based routing, and system customization.
6	scalability of the solution	The solution can easily grow with the business by handling more tickets, agents, and support teams without losing speed or accuracy. It can be used by small teams or large organizations and can integrate with existing support tools to support future expansion.

STREAMLINING TICKET ASSIGNMENT FOR EFFICIENT SUPPORT OPERATIONS

MILESTONE -1 USERS

ACTIVITY 1:create Users

PURPOSE:

User creation helps set up profiles for support agents with their skills, availability, and roles. This makes it easier to quickly assign tickets to the right person, improving support speed and customer satisfaction.

USES

User creation saves key details about each support agent, like their skills and availability. This helps the system quickly assign tickets to the right agent, making support faster and more efficient

STEPS:

- 1.Open service now.
- 2.Click on All >> search for user
3. Select Users under system security
- 4.Click on new
5. Fill the following details to create a new user
- 6.Click on submit

Create one more user

7. Create another user with the following details
8. Click on submit

MILESTONE -2 GROUPS

ACTIVITY 1: create Groups

PURPOSE:

Group creation helps organize support agents into teams based on their skills, departments, or ticket types. This makes it easier to assign tickets to the right team, improving ticket handling speed and ensuring the right experts work on the right issues.

USES:

Group creation helps organize support agents into teams based on skills or departments. This makes it easier to quickly assign tickets to the right team, improving support speed, workload balance, and overall efficiency.

STEPS:

1. Open service now.
2. Click on All >> search for groups
3. Select groups under system security
4. Click on new
5. Fill the following details to create a new group
6. click on submit
- Create one more Group
7. Create another group with the following details
8. Click on submit

MILESTONE -3 ROLES

ACTIVITY 1: Create Roles

PURPOSE:

Roles creation defines what each user can do in the system, such as managing tickets, handling specific tasks, or overseeing teams. It helps control access, organize responsibilities, and ensure the right people have the right permissions to keep the support process smooth and secure.

USES:

Roles creation helps assign specific permissions and responsibilities to each user. It ensures that agents, team leads, and managers can only access the features they need, making the ticket assignment process organized, secure, and efficient.

STEPS:

1. Open service now
2. Click on All >> search for roles
3. Select roles under system security
4. Click on new
5. Fill the following details to create a new role
6. Click on submit
 - Create one more role
7. Create another role with the following details
8. click on submit

MILESTONE -4 TABLE

ACTIVITY-1 Creating Table

PURPOSE:

Table creation is used to store, organize, and display important data like user details, ticket information, groups, and roles in a clear and structured way. This helps the system easily manage and track tickets, making the assignment process faster, more accurate, and easier to control.

USES:

Table creation helps store and organize data like users, tickets, groups, and roles. It makes it easy to manage, track, and quickly assign tickets to the right agents or teams.

STEPS:

1. Open service now.
2. Click on All >> search for tables
3. Select tables under system definition
4. Click on new
5. Fill the following details to create a new table
 - Label : Operations related
 - Check the boxes Create module & Create mobile module

6.Under new menu name : Operations related

7.Under table columns give the columns

8.Click on submit

Create choices for the issue filed by using form design

Choices are

*unable to login to platform

* 404 error

*regarding certificates

*regarding user expired

The screenshot displays the Oracle APEX interface for managing the 'u_operations_related' table. The 'Table Columns' tab is active, showing a list of columns with their respective types, lengths, and default values. Below this, the 'Access Controls' tab is visible, showing a list of access rules for the table, including the user 'admin' and the role 'certificate_group'.

Column label	Type	Reference	Max length	Default value	Display
Updates	Integer	(empty)	40		false
Updated by	String	(empty)	40		false
Updated	Date/Time	(empty)	40		false
Ticket raised date	Date/Time	(empty)	40		false
Sys ID	Sys ID (GUID)	(empty)	32		false
Service request No	String	(empty)	40		false
Priority	String	(empty)	40		false
Name	String	(empty)	40		false
Issue	String	(empty)	40		false
Created by	String	(empty)	40		false
Created	Date/Time	(empty)	40		false
Comment	String	(empty)	40		false
Assigned to user	Reference	User	32		false
Assigned to group	Reference	Group	32		false

Name	Decision Type	Operation	Type	Active	Updated by	Update
u_operations_related	Allow If	delete	record	true	admin	2025-09-08:31:11
u_operations_related	Allow If	read	record	true	admin	2025-09-08:31:11
u_operations_related	Allow If	write	record	true	admin	2025-09-08:31:11
u_operations_related	Allow If	create	record	true	admin	2025-09-08:31:11
u_operations_related	Allow If	create	record	true	admin	2025-09-08:31:11
u_operations_related	Allow If	write	record	true	admin	2025-09-08:31:11
u_operations_related	Allow If	read	record	true	admin	2025-09-08:31:11
u_operations_related	Allow If	delete	record	true	admin	2025-09-08:31:11
u_operations_related.u_issue	Allow If	create	record	true	admin	2025-09-08:31:11
u_operations_related.u_name	Allow If	create	record	true	admin	2025-09-08:31:11
u_operations_related.u_priority	Allow If	create	record	true	admin	2025-09-08:31:11
u_operations_related.u_service_request_no	Allow If	create	record	true	admin	2025-09-08:31:11
u_operations_related.u_ticket_raised_date	Allow If	create	record	true	admin	2025-09-08:31:11

MILESTONE -5 ASSIGN ROLES & USERS TO GROUP

ACTIVITY-1 Assign roles & users to certificate group

PURPOSE:

Assigning roles and users to a certificate group helps make sure the right people handle the right tickets. It ensures tickets go to qualified agents quickly and safely.

USES:

It helps the system automatically send specific tickets to the right certified agents or teams, making ticket assignment faster, more accurate, and handled by qualified people.

STEPS:

- 1.Open service now.
- 2.Click on All >> search for tables
- 3.Select tables under system definition
- 4.Select the certificates group
- 5.Under group members

6. Click on edit
7. Select Katherine Pierce and save
8. Click on roles
9. Select Certification_role and save

The screenshot shows the ServiceNow interface for editing a group named 'certificates'. The form includes fields for Name, Manager (katherine.pierce), Group email, and Parent. Below the form is a table showing the roles assigned to the group.

Created	Role	Granted by	Inherits
2025-06-25 00:08:13	certification_role	(empty)	true

ACTIVITY -2 Assign roles & users to platform group

PURPOSE:

Assigning roles and users to a platform group helps organize agents based on the platforms or tools they support. This ensures tickets related to specific platforms are quickly assigned to the right experts, improving accuracy and response time

USES:

It helps the system automatically send platform-specific tickets to the right agents who are trained for that platform, making ticket assignment faster, more accurate, and efficient.

T shirt

STEPS:

1. Open service now.
2. Click on All >> search for tables
3. Select tables under system definition
4. Select the platform group

- 5.Under group members
- 6.Click on edit
- 7.Select Manne Niranjana and save
- 8.Click on role
- 9.give platform role and save

MILESTONE-6 ASSIGN ROLE TO TABLE

ACTIVITY-1 Assign role to table

PURPOSE:

Assigning roles to a table helps control who can view, edit, or manage the information in that table. It ensures that only the right users with proper permissions can access or update ticket, user, or group data, keeping the system organized, secure, and efficient.

USES:

It controls who can see or update the table data, making sure only the right people can manage tickets, users, or groups. This keeps the ticket assignment process safe, organized, and efficient.

STEPS:

1. Open service now.
2. Click on All >> search for tables
3. Select operations related table
4. Click on the Application Access
5. Click on u_operations_related read operation
6. Click on the profile on top right side
7. Click on elevate role
8. Click on security admin and click on update
9. Under Requires role
10. Double click on insert a new row
11. Give platform role
12. And add certificate role
13. Click on update
14. Click on u_operations_related write operation
15. Under Requires role
16. Double click on insert a new row
17. Give platform role
18. And add certificate role

Warning: A role, security attribute, data condition, script or ACL control via reference fields is required to properly secure access with this ACL.

* Type: record

* Operation: write

Decision Type: Allow If

Admin overrides: ☒

Protection policy: -- None --

* Name: *

Description:

Applies To: Not a valid table name

Conditions

Access Control Rules have two decision types, and these types will behave differently depending on conditions.

1. Allow Access: Allows access to a resource if all conditions are met. Additional ACLs may grant access to records where this ACL has not granted access.

2. Deny Access: Denies access to a resource unless all conditions are met. Additional ACLs may not grant access to records where this ACL has denied access.

MILESTONE-7 CREATE ACL

ACTIVITY-1 Create ACL

PURPOSE:

Creating an ACL (Access Control List) helps set rules about who can view, create, edit, or delete specific data. This keeps the ticket assignment process secure by making sure only authorized users can access or change important information.

USES:

Creating an ACL helps control user access to tickets, tables, and other system data. It makes sure only the right people can view or update information, keeping the ticket assignment process secure and well-managed.

STEPS:

1. Open service now.

2. Click on All >> search for ACL
3. Select Access Control (ACL) under system security
4. Click on new
5. Fill the following details to create a new ACL
6. Scroll down under requires role
7. Double click on insert a new row
8. Give admin role
9. Click on submit
10. Similarly create 4 acl for the following fields

MILESTONE -8 FLOW

ACTIVITY-1 Create a Flow to Assign operations ticket to group

PURPOSE:

Purpose of Creating a Flow to Assign Operations Ticket to Group: The purpose is to automate the process of directing operations-related tickets to the right support group.

USES:

It automatically routes operations tickets to the correct group, speeding up ticket handling and improving support efficiency.

STEPS:

1. Open service now.
2. Click on All >> search for Flow Designer
3. Click on Flow Designer under Process Automation.
4. After opening Flow Designer Click on new and select Flow.
5. Under Flow properties Give Flow Name as “ Regarding Certificate”.
6. Application should be Global.
7. Select Run user as “ System user ” from that choice.
8. Click on Submit.

1. Click on Add a trigger
2. Select the trigger in that Search for “create or update a record” and select that.
3. Give the table name as “ Operations related ”.
4. Give the Condition as
Field : issue
Operator : is
Value : Regrading Certificates
5. After that click on Done
6. Now under Actions.
7. Click on Add an action.
8. Select action in that search for “ Update Record ”.
9. In Record field drag the fields from the data navigation from left side
10. Table will be auto assigned after that
11. Give the field as “ Assigned to group ”
12. Give value as “ Certificates ”
13. Click on Done.
14. Click on Save to save the Flow.
15. Click on Activate.

ACTIVITY-2 Create a Flow to Assign operations ticket to Platform

PURPOSE:

To automatically assign operations tickets to the right platform experts, ensuring faster and accurate support.

USES:

It routes operations tickets to the correct platform specialists automatically, improving response time and support accurate

STEPS:

1. Open service now.
 2. Click on All >> search for Flow Designer
 3. Click on Flow Designer under Process Automation.
 4. After opening Flow Designer Click on new and select Flow.
 5. Under Flow properties Give Flow Name as " Regarding Platform ".
 6. Application should be Global.
 7. Select Run user as " System user " from that choice.
 8. Click on Submit.
1. Click on Add a trigger
 2. Select the trigger in that Search for "create or update a record" and select that.
 3. Give the table name as " Operations related ".

4. Give the Condition as
 - Field : issue
 - Operator : is
 - Value : Unable to login to platform
5. Click on New Criteria
 - Field : issue
 - Operator : is
 - Value : 404 Error
6. Click on New Criteria
 - Field : issue
 - Operator : is
 - Value : Regrading User expired
7. After that click on Done.
8. Now under Actions.
9. Click on Add an action.
10. Select action in that search for “ Update Record ”.
11. In Record field drag the fields from the data navigation from left side
12. Table will be auto assigned after that
13. Give the field as “ Assigned to group ”.
14. Give value as “ Platform ”
15. Click on Done.
16. Click on Save to save the Flow.
17. Click on Activate.
